DATA QUALITY REPORT

Stage III/IV Sampling

INTRODUCTION

This report documents the results of data validation and quality assurance review of soil and groundwater sample data collected in support of the Stages 3 & 4 sampling for the Bannister Federal Complex Due Diligence Site Investigation. This data set includes analytical results for soil and groundwater samples, and field quality control samples as well as the associated quality control analyses (method blanks, laboratory control samples, matrix spikes, and laboratory duplicates). A summary of laboratory sample delivery group (SDG) and associated tests is provided as **TABLE 1**. A summary of the field duplicates collected for Stage 1 with the associated parent sample is included as **TABLE 2**.

Samples were analyzed by Eurofins Lancaster Laboratories, Lancaster, Pennsylvania. Data were validated by the following EcoChem, Inc. chemists.

DATA VALIDATION PROCESS AND PROCEDURES

The data validation process and measurement quality objectives (MQO) were based on requirements and guidance from the *Due Diligence Site Investigation Work Plan Stage I for Bannister Federal Complex, Kansas City, Missouri* (February, 2015); the USEPA *National Functional Guidelines for Inorganic Data Review* (January 2010 & Aug 2014); and the USEPA *National Functional Guidelines for Organic Data Review* (October, 1999, June 2008 & Aug 2014). Method performance criteria are documented in the laboratory quality assurance project plan (available in Attachment 1 of the Work Plan).

Sample results and related QC data were received in both electronic and portable document format (pdf) format. The laboratory electronic data deliverables (EDD) were verified against the hard copy data packages prior to validation.

For each data package, either a Summary or Full level of review was performed. A summary level is equivalent to an USEPA CLP "QA Level III" level of effort, and a Full level review is equivalent to an USEPA CLP "QA Level IV" level of effort. The validation level for each sample is provided in the database.

For each data package, the QC elements described below were reviewed:

QUALITY CONTROL ELEMENTS
<ul style="list-style-type: none">• Analytical holding times• Chain of custody and sample handling• Instrument performance: MS tune and ICP interference check samples (from summary forms)• Method blank contamination (from summary forms)• Instrument blank contamination for metals analysis (from summary forms)• Initial and continuing calibration (from summary forms)• Field blank contamination (from sample result summaries)• Analytical accuracy: surrogate %R for organic analyses, matrix spike sample %R, serial dilution for metals analysis, and laboratory control sample %R (from summary forms)• Analytical precision: matrix spike duplicate and laboratory duplicate sample RPD (from summary forms)• Internal standard areas (from summary forms)• Reported detection limits (from sample result summaries)• Compound identification evaluated from raw data - <i>Full Validation Only</i>• Compound quantitation, transcription and calculation checks performed at a frequency of 10 percent from raw data. If an error was noted, 100 percent of the calculations and transcriptions for that data package were verified. - <i>Full Validation Only</i>

Laboratory QC samples were used to assess the effectiveness of extraction/preparation procedures and to evaluate laboratory method performance, potential contamination during the analytical process, and sample matrix effects. Quality control samples included method blanks, laboratory control samples (LCS), matrix spike (MS) samples, and laboratory duplicate samples. Surrogates were added to each sample analyzed for organic compounds to further assess the effects of sample matrix on accuracy.

During validation, the results of the QC samples and instrument calibration and tuning are compared to the measurement quality objectives (MQO) initially established during project planning and documented in the QAPP. Validation also provides a quantitative and qualitative evaluation of the data and identifies potential sources of error, uncertainty, and bias that may affect the overall data usability.

Data were qualified when associated QC sample and instrument performance results were outside the laboratory QC sample control limits. The qualifiers assigned to results during the data validation process are defined in **TABLE 3**.

For each qualifier, one or more reason codes were added to indicate which QC element(s) did not meet the MQO. The reason codes assigned during the data validation process are defined in **TABLE 4**.

SUMMARY OF DATA USABILITY

All data packages were evaluated to determine whether the measurement quality objectives were met. Data validation criteria, developed from the analytical methods and EPA Functional Guidelines, are included as **ATTACHMENT A**. The technical sections that follow this summary provide detailed discussion of each quality control outlier and resulting data qualification.

EcoChem's goal in assigning qualifiers is to assist in proper data interpretation. If values are assigned a J or UJ, data may be used for site evaluation and risk assessment purposes, but reasons for data qualification should be taken into consideration when interpreting sample concentrations. If values are assigned an R, the data are to be rejected and should not be used for any site evaluation purposes. If values have no data qualifier assigned, then the data meet all measurement quality objectives as stated in the documents and methods referenced in this report.

The overall quality of the data is acceptable. A total of 4,794 data points (7.77%) were estimated (J/UJ/NJ) and 207 data points (0.335%) were qualified as not detected (U). Qualified data points may have a larger associated bias or may be less precise than unqualified data, but are usable for the intended purpose.

A total of 8 data points were rejected based on very low matrix spike recoveries. *Data that have been rejected should not be used for any purpose.*

All other data, as qualified, are acceptable for use.

A tabulation of number of qualified data points is provided in **TABLE 5**. Please refer to the database to reference all qualified data.

Data Package, EDD, and Holding Time

This report documents the review of the completeness of data deliverables and verification of the electronic data deliverable (EDD) to the laboratory report. This report also documents sample receipt, preservation and holding time compliance.

DATA PACKAGE COMPLETENESS

The laboratory submitted all required deliverables. The laboratory followed adequate corrective action processes and all anomalies were discussed in the case narrative.

SDG 1595956: Results for explosives analyses by method 8330B were not included in the data package for samples CP-6013-A(0-2), CP-6013-A(2-5), and CP-6013-B. The laboratory was contacted and indicated that the request for analysis was inadvertently missed during sample login and the test was not performed for these samples. As there was no volume remaining for these samples, no results for explosives analysis is reported.

SDG 1596117: The calibration instrument summary and printouts for TPH by method SW8015B modified were not included for instrument 10254A. The instrument summary and printouts for this calibration were included with SDG 1595956 and were used for evaluation; no further action required.

SDG 1597085: The "Reportable Result" field for vinyl chloride in Samples CP-3124-B and CP-3124-D in method 8260C were changed from "No" to "Yes" where the "Laboratory Qualifier" was equal to "E".

SDG 1597492: The calibration instrument summary and printouts for TPH-GRO by method SW8260C modified were not included for instruments HP09953, HP07566, and HP09137. The instrument summary and printouts for this calibration were included with SDG 1595467 and were used for evaluation; no further action required.

Additionally, the "Reportable Result" field for vinyl chloride in Sample CP-3123-B in method 8260C was changed from "No" to "Yes" where the "Laboratory Qualifier" was equal to "E".

SDG 1597495: The "Reportable Result" field for Freon 113 or GRO in Samples CP-6016-D, CP-6016-E and CP-6016-F in method 8260C were changed from "No" to "Yes" where the "Laboratory Qualifier" was equal to "E".

SDG 1597838: The "Reportable Result" field for Freon 113, tetrachloroethene, trichloroethene and cis-1,2-dichloroethene in Sample CP-4308-D for method 8260C were changed from "No" to "Yes" where the "Laboratory Qualifier" was equal to "E".

SDG 1600650: The chains-of-custody (COC) for the samples in the table listed below were missing from the laboratory data package. The client provided the missing documents.

CP-3213-B	CP-3213-E
CP-3213-C	TB-20-10/13/15
CP-3213-D	BD-20-10/13/15

SDG 1599229: The "Reportable Result" field for GRO in Sample CP-3209-F in method 8260C were changed from "No" to "Yes" where the "Laboratory Qualifier" was equal to "E".

EDD TO HARDCOPY VERIFICATION

A verification of the electronic data deliverable (EDD) results was performed by comparison to the laboratory data package. All sample results and 10% of the QC results were verified.

SAMPLE PRESERVATION AND HOLDING TIMES

As stated in validation guidance documents, sample shipping coolers should arrive at the laboratory within the advisory temperature range of $\leq 6^{\circ}\text{C}$. The laboratory received the sample coolers within the temperature range of 0.3°C to 5.8°C .

With the exceptions noted in the following table, samples were analyzed by the laboratory within the method and project holding time requirements.

CHAIN OF CUSTODY DOCUMENTATION

Sample identification (ID) numbers listed on the chain-of-custody (COC) record were consistent with the sample ID reported in the EDD and laboratory analytical report.

For this project certain results observed in the preliminary data triggered additional analyses or re-analyses of specified samples. These requests were not documented in the data packages but were recorded via email between the client and laboratory. Anomalies of COC documentation for situations of this nature are not addressed in this report.

Anomalies noted during sample receipt are listed below:

SDG 1595461: The field duplicate sample, BD-13-09/23/15, as listed on the sample container was listed on the COC as BD-14-09/23/15 and field duplicate, BD-12-09/23/15, as listed on the sample container was listed on the COC as BD-0703-09/23/15. The collection time for Sample CP-2216-B was listed on the COC as 17:00; the sample container reported 17:09. The client confirmed the sample container had correct sample IDs and collection time with an email attached to the laboratory report.

The trip blanks were not marked for 8260C+TICs analysis. The laboratory confirmed with the client via email that the trip blanks were requested for analysis.

SDG 1597085: The Trip Blank TB-11/29/15 was listed on the COC as TB-11/28/15 and field duplicate BD-21-09/29/15 was listed on the COC as BD-20/29/15. The client confirmed the sample container had correct sample IDs with an email attached to the laboratory report.

SDG 1597495: Sample CP-508-B was listed on the COC as CP-508-A (2-5). The client confirmed the sample container had correct sample ID with an email attached to the laboratory report.

SDG 1598833: The field duplicate BD-20-10/06/15 was listed on the COC as BD-20-09/29/15. The sampler corrected the COC with initials and date; no other anomalies were reported with this sample.

OVERALL ASSESSMENT

As was determined by this evaluation, with the exceptions previously noted, the laboratory data packages were complete, the EDD files were verified against the laboratory report, and samples were received in good condition under the proper preservation requirements and were prepared and analyzed within the required holding times.

Data were estimated based on holding time outliers.

All data, as qualified, are acceptable for use.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

✓	GC/MS Instrument Performance (Tune)	1	Field Duplicates
✓	Initial Calibration (ICAL)	2	Internal Standards
2	Continuing Calibration (CCAL)	✓	Target Analyte List
✓	Laboratory Blanks	1	Reporting Limits
1	Field Blanks	✓	Compound Identification
✓	Laboratory Control Samples (LCS)	2	Reported Results
1	Matrix Spikes/Matrix Spike Duplicates (MS/MSD)	✓	Calculation Verification
2	Surrogate Compounds		

✓ Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.

1 Quality control results are discussed below, but no data were qualified.

2 Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.

Continuing Calibration

All RRF values were greater than the 0.05 minimum control limit (0.01 for analytes exhibiting poor response). With the exceptions noted below, and all %D values were within the ±25% (40% for analytes exhibiting poor response) control limit for all continuing calibrations (CCAL). When the %D outlier indicates a potential high bias, and there were no positive results for these compounds, no qualifiers were required. The table below summarizes qualifiers issued based on %D outliers:

SDG	CCAL DATE	ANALYTE	POTENTIAL BIAS	ACTION
1595467	10/2/15	1,2,4-Trichlorobenzene	Low	UJ-5BL
1596117	10/9/15

1599664	10/13/15			
1599905	10/22/15			
1600339	10/16/15			

Field Blanks

Sample RB-20-10/12/15 was submitted as the only field blank for the Phase III/IV sampling event. Target analytes were not detected in this rinse blank sample; no qualifiers were applied resulting from field blank evaluation.

Matrix Spike/Matrix Spike Duplicates

Matrix spike/matrix spike duplicate (MS/MSD) analyses were not performed. Accuracy and precision were evaluated utilizing the laboratory control sample/laboratory control sample duplicate (LCS/LCSD).

Surrogate Compounds

The surrogate compounds 4-bromofluorobenzene, toluene-d8, 1,2-dichloroethane-d4, and dibromofluoromethane were added to all field and batch QC samples. When two or more surrogate %R values are below the control limits and indicate a potential low bias, associated results for the affected fraction are estimated (J/UJ-13L). When two or more surrogate %R values are greater than the control limit and indicate a potential high bias, only the positive results in a fraction for a sample are estimated (J-13H). If there is one surrogate outlier that is less than 10% recovery, the reporting limits are rejected (R-13L) and the detections are estimated (J-13L). With the exceptions noted below, all surrogate spike recoveries were within the laboratory control limits.

SDG 1597848: For Samples BD-21-10/05/15 and CP-2212-H, the toluene-d8, 1,2-dichloroethane-d4, and dibromofluoromethane %R values were less than the lower control limits, indicating a potential low bias. Additionally, the %R value for 4-bromofluorobenzene was less than the lower control limit for Sample CP-2212-H. All analytes for these samples were estimated (J/UJ-13L) to indicate a potential low bias.

Field Duplicates

For soil samples, the RPD control limit is 35% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

TABLE 2 summarizes the complete list of parent sample and field duplicate pairs collected for the Phase II sampling. The field duplicate outliers are noted in the following table. No qualifiers were applied based on field duplicate precision outliers. Data users should take field precision into account when interpreting sample data.

SDG	PARENT SAMPLE ID	FIELD DUPLICATE ID	ANALYTE	RPD
1596579	CP-5002-A(0-2)	BD-12-09/28/15	cis-1,2-Dichloroethene	188
1599905	CP-6001R-A(2-5)	BD-20-10/09/15	GRO	188

Internal Standards

Internal standards were added to all samples as required by the method. With the following exceptions, internal standard responses were within the method specified control limits of 50% – 200% of the response in the associated calibration verification standard.

SDG 1595045: The response for 1,4-dichlorobenzene-d4 was less than the lower control limit for Sample CP4509-E. There were no positive results associated with this internal standard; reporting limits were estimated (UJ-19) to indicate potential bias.

SDG 1596117: The response for 1,4-dichlorobenzene-d4 was less than the lower control limit for Sample BD-10-09/25/15. There were no positive results associated with this internal standard; reporting limits were estimated (UJ-19) to indicate potential bias.

Reporting Limits

All SDGs: Reporting limits (RLs) were elevated due to sample size, percent moisture adjustment, and/or dilution.

Several samples were analyzed at a high dilution or as a medium level methanol extraction due to the high concentrations of target compounds.

Compound Identification

No anomalies were noted during validation for compound identification.

Reported Results

No anomalies were noted during validation for evaluated results.

Tentatively identified compounds were detected in several samples and were estimated (NJ-4) to indicate uncertainty in identification.

For the samples indicated in the following table, results were E-flagged by the laboratory to indicate that the result exceeded the calibration range. These results were estimated (J-20).

Calculation Verification (Level 4 Only)

SDG 1595461 and 1600339: Several results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory followed the specified analytical method. With the exceptions noted previously, accuracy was acceptable as demonstrated by the surrogate and laboratory control sample/laboratory control sample duplicate (LCS/LCSD) values. Precision was also acceptable as demonstrated by the LCS/LCSD and field duplicate RPD values.

Data were estimated due to CCAL %D outliers, surrogate and internal standard recovery outliers, and compound concentrations that exceeded the linear calibration range. TICs were estimated because these results were not quantitated based on an analyte-specific calibration and are tentatively identified.

Results were also estimated due to exceeded holding times. See the DATA PACKAGE, EDD, AND HOLDING TIME report for details.

All data, as qualified, are acceptable for use.

TECHNICAL DATA VALIDATION

This report documents the review of analytical QC requirements as listed in the following table.

✓ *Stated method quality objectives (MQO) and QC criteria have been met. No outliers are noted or discussed.*

1 *Quality control results are discussed below, but no data were qualified.*

2 *Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.*

Initial Calibration

Initial calibration (ICAL) relative response factor (RRF) values were greater than or equal to the control limit of 0.05 (≥ 0.01 for poorly responding analytes) and the percent relative standard deviation (%RSD) values were within the control limit of 20% (40% for poorly responding compounds) or if a second order curve was used the co-efficient of determination (r^2) is greater than 0.99. With the following exceptions, the calibration criteria were met:

All SDGs: The Missouri DNR requirements for analysis of Total Petroleum Hydrocarbons-Diesel Range Organics (TPH-DRO) and Oil Range Organics (TPH-ORO) requires the use of a mixture of unleaded gasoline and #2 Diesel for the calibration. There are no oil range hydrocarbons included among the calibration standards. Because of this, the TPH-ORO uses the calibration factor of a designated 'parent' (TPH-DRO) for calculation of the TPH-ORO concentration. Since the calibration factor of the parent range can be significantly different, all results for TPH-ORO are estimated (J/UJ-5A).

Continuing Calibration Verification

Continuing calibration verification (CCV) standards were analyzed at the required frequency. Relative response factors (RRF) were greater than or equal to 0.05 for all compounds except for poorly responding compounds with RRF values greater than or equal to 0.01. The percent difference (%D) values were less than or equal to 25% for all compounds except for poorly responding compounds were less than or equal to 40.0%. When the CCV %D values indicate a potential low bias, associated

results are estimated (J/UJ-5BL). Only the associated positive results are estimated (J-5BH) if the %D value indicates a potential high bias. The table below summarizes qualifiers issued based on %D outliers:

SDG	CCV DATE	ANALYTE	POTENTIAL BIAS	ACTION
1595045	9/30/15	Hexachlorocyclopentadiene	Low	UJ-5BL

All SDGs: TPH-ORO uses the average calibration factor for TPH-DRO to calculate the CCV percent difference (%D) values. The TPH-ORO %D values for all CCV were less than the lower control limit. Because the TPH-ORO results were estimated based on the initial calibration, no further action was taken for CCV outliers.

Laboratory Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-7). No action is taken if the sample result is greater than the action level, or for non-detected results.

Laboratory blanks were analyzed at the appropriate frequency. Contaminant levels, associated samples, and action levels are documented in the data validation worksheets.

SDG 1595956: TPH-ORO was detected in the method blanks for batches 15278SLI02 and 15278SLJ02. The results for TPH-ORO in samples less than the action limits were qualified (U-7).

SDG 1596117: TPH-ORO was detected in the method blank for batch 15279SLA02. The results for TPH-ORO in samples less than the action limit were qualified (U-7).

SDG 1597495: TPH-ORO was detected in the method blank for batch 15285SLD026. The results for TPH-ORO in samples less than the action limit were qualified (U-7).

SDG 1597848: TPH-ORO was detected in the method blank for batch 15287SLB02. The results for TPH-ORO in samples less than the action limit were qualified (U-7).

SDG 1600339: TPH-DRO and TPH-ORO were detected in the method blank for batch 15289EAG026. The results for these analytes were qualified (U-7) in Sample RB-20-10/12/15.

Field Blanks

Sample RB-20-10/12/15 was submitted as the only field blank for the Phase III/IV sampling event. After qualification due to method blank contamination no target analytes remained in this sample.

Laboratory Control Samples

Laboratory control samples (LCS) and/or laboratory control sample/ laboratory control sample duplicates (LCS/LCSD) were analyzed at the required frequency of one per batch of 20 or fewer samples. For batches with both and LCS and LCSD, no action is taken unless both the LCS and LCSD %R values are outside the control limits. Precision is evaluated using the relative percent difference (RPD) values calculated between the LCS and LCSD results.

When the LCS/LCSD %R values indicate a potential low bias, associated results are estimated (J/UJ-10L). Only the associated positive results are estimated (J-10H) if the %R values indicate a potential high bias. Associated positive results are estimated (J-9) if the RPD values indicate uncertainty. Qualifiers were issued to all samples in an extraction batch.

Although various laboratory control samples exhibited recoveries outside control limit, only the following required qualification in the associated field samples:

SDG	BATCH	ANALYTE	LCS %R	LCSD %R	RPD	POTENTIAL BIAS	ACTION
1600339	15289WAG02	TPH-DRO	31	37	--	Low	UJ-10L

Matrix Spike/Matrix Spike Duplicates

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. No action is taken unless both the MS and MSD %R values are outside the control limits for MS/MSD %R outliers. Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. Any RPD values outside the control limits indicate uncertainty in the measured results for the sample. Qualifiers were only issued to the parent sample.

When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-8L). Only the associated positive results are estimated (J-8H) if the %R values indicate a potential high bias. Associated positive results are estimated (J-9) when the RPD values indicate uncertainty.

SDG 1597495: For the MS/MSD analyses using Sample CP-6016-F the %R values for 60 of 67 analytes were less than the lower control limit, indicating a potential low bias. The %R values ranged from 9% to 71%. Of these outliers, the analytes hexachlorocyclopentadiene and 2,4-dinitrophenol were not recovered, indicating a potential very low bias; results for these analytes were rejected (R-8L). The results for all other outliers were estimated (UJ-8L) to indicate the potential low bias.

SDG 1597848: The MS %R for TPH-DRO was 0% and the MSD recovery was 121%. It is suspected that this sample was inadvertently not spiked during the extraction process. The laboratory was contacted and also suspected that the sample was not spiked. Because the MSD recovery was in control, it was determined to not be a systematic analytical problem and the parent sample was not qualified.

SDG 1598415: For the MS/MSD analyses using Sample CP-3004-A(0-2), the RPD values for 45 of 67 analytes were outside the 30% control limit resulting in estimation of 14 results (J-9). The RPD values ranged from 31% to 36%. The hexachlorocyclopentadiene and 4,6-dinitro-2-methylphenol %R values were less than the lower control limits, indicating a potential low bias; results for these analytes were estimated (UJ-8L).

SDG 1599905: For the MS/MSD analyses using Sample CP-1204-C, the %R values for 14 of 67 analytes were less than the lower control limit, indicating a potential low bias. The %R values ranged from 12% to 70%. Of these outliers, the analyte 4,6-dinitro-2-methylphenol was recovered at less than 10%, indicating a potential very low bias; the result for this analyte was rejected (R-8L). The results for all other outliers were estimated (J/UJ-8L) to indicate the potential low bias.

Surrogate Compounds

The surrogate compounds phenol-d6, 2,4,6-tribromophenol, 2-fluorobiphenyl, 2-fluorophenol, nitrobenzene-d5, and terphenyl-d14, were added to all field and batch QC samples. When two or more surrogate %R values are below the control limits and indicate a potential low bias, associated results for the affected fraction are estimated (J/UJ-13L). When two or more surrogate %R values are greater than the control limit and indicate a potential high bias, only the positive results in a fraction for a sample are estimated (J-13H). If there is one surrogate outlier in a fraction that is less than 10% recovery, the reporting limits for that fraction are rejected (R-13L) and the detections are estimated (J-13L). With the exceptions noted below, all surrogate spike recoveries were within the laboratory control limits.

SDG 1597848: For Sample CP-5005-C, the %R values for acid surrogates 2,4,6-tribromophenol and phenol-d6 and the base/neutral surrogates nitrobenzene-d5, 2-fluorobiphenyl, and terphenyl-d14 were less than the lower control limits, indicating a potential low bias. All analytes within this sample were not detected; the detection limits were estimated (UJ-13L) to indicate a potential low bias.

SDG 1600336: For Sample CP-3212-G, the %R values for all surrogates were less than the lower control limits, indicating a potential low bias. All analytes within this sample were not detected; the detection limits were estimated (UJ-13L) to indicate a potential low bias.

SDG 1600650: For Sample CP-3213-G, the %R values for the base/neutral surrogates terphenyl-d14 and 2-fluorobiphenyl were less than the lower control limits, indicating a potential low bias. No base/neutral fraction analytes were detected; the detection limits were estimated (UJ-13L) to indicate a potential low bias.

Field Duplicates

For soil samples, the RPD control limit is 35% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

TABLE 2 summarizes the complete list of parent sample and field duplicate pairs collected for the Phase II sampling. The number of field duplicate outliers is noted in the following table. No qualifiers were applied based on field duplicate precision outliers. Data users should take field precision into account when interpreting sample data.

Reporting Limits

All SDGs: Reporting limits (RLs) were elevated due to percent moisture adjustment and/or dilution.

Reported Results

No anomalies were noted during validation for evaluated results.

Compound Identification

All SDGs: The analyses indicated the presence of tentatively identified compounds (TIC). These results were estimated (NJ-4) because calibrations were not performed for these compounds and the identity of the compounds is tentative and the associated concentrations are approximations.

If a TIC was positively identified in the method blank, an action level was established at five times (5X) the blank concentration. Results for the TIC in the associated samples that were less than the action level were rejected (R-4,7).

No anomalies were noted during validation for compound identification.

Calculation Verification (Full Level Validation Only)

SDGs 1595461 and 1600339: Several results were verified by recalculation from the raw data. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory followed the specified analytical method. With the exceptions noted above, accuracy was acceptable, as demonstrated by the surrogate, LCS and/or LCS/LCSD, and MS/MSD percent recovery values. Precision was also acceptable, with the exceptions noted above, as demonstrated by the LCS/LCSD, MS/MSD and field duplicate relative percent difference values.

Detection limits were elevated due to method blank contamination. Results were estimated due to LCS/LCSD, surrogate, and MS/MSD accuracy outliers and MS/MSD precision outliers as well as a CCV %D outlier. Results were also estimated due to quantitation of oil range organics against a "parent" range rather than the oil range itself. Additionally, TICs were estimated because these results were not quantitated based on an analyte-specific calibration and are tentatively identified.

Results were rejected due to MS/MSD accuracy outliers. TIC results were also rejected due to method blank contamination.

Results that have been rejected should not be used for any purpose.

All other data, as qualified, are acceptable for use.

2 *Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.*

Continuing Calibration

Although some continuing calibration (CCAL) percent difference (%D) values were outside the $\pm 25\%$ control limit, the associated samples did not require qualification. Results were either not detected while associated with a CCV with potential high bias, or the result was reported from the other analytical column which was in control.

Field Blanks

Sample RB-20-10/12/15 was submitted as the only field blank for the Phase III/IV sampling event. Target analytes were not detected in this sample; no qualification was required.

Matrix Spike/Matrix Spike Duplicates

Matrix spike/matrix spike duplicate samples (MS/MSD) were analyzed at the appropriate frequency. Where analyte concentrations were less than 4x the spike amount, the percent recovery (%R) and relative percent difference (RPD) values were evaluated. No action is taken unless both the MS and MSD %R values are outside the control limits for MS/MSD %R outliers. Matrix spike results from samples diluted at a factor of 10 or greater are not evaluated because the dilution prevents accurate recovery of the spiked analyte. Precision is indicated by the relative percent difference (RPD) between the MS and MSD values. Any RPD values outside the control limits indicate uncertainty in the measured results for the sample. Qualifiers were only issued to the parent sample.

When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-8L). Only the associated positive results are estimated (J-8H) if the %R values indicate a potential high bias. Associated positive results are estimated (J-9) if the RPD values indicate uncertainty.

SDG 1598415: The %R values for Aroclor 1016 and Aroclor 1260 were less than the lower control limits for Sample CP-3208-D, indicating a potential low bias. The results for these Aroclors were estimated (UJ-8L).

Surrogate Compound

The surrogate compounds decachlorobiphenyl (DCBP) and tetrachloro-m-xylene (TCMX) were added to all samples. When the surrogate %R values indicate a potential low bias, associated results are estimated (J/UJ-13L). Only the associated positive results are estimated (J-13H) if the %R values indicate a potential high bias. If one or both surrogates are outside the control limits, the associated results in the sample are qualified. Surrogate spike results from samples diluted at a factor of 10 or greater are not evaluated because the dilution prevents accurate recovery of the spiked analyte. Qualifiers are not applied to QC samples. With the exceptions noted below, all surrogate recovery values were within the laboratory control limits.

SDG 1598415: For Samples CP-3208-D and CP-3208-F the %R values for DCBP and TCMX were less than the lower control limits, indicating a potential low bias. All associated results for these two samples were estimated (UJ-13L).

SDG 1599905: For Samples CP-1204-A(0-2), CP-1240-A(2-5), CP-1204-B, CP-1204-C, and/or BD-10-10/09/15 the %R values for TCMX or DCBP and TCMX were recovered outside control limits. These samples were analyzed at dilution factors of greater than 10x, preventing accurate recovery of the surrogate compounds; no data were qualified.

SDG 1600339: For Sample CP-3211-H the %R values for DCBP and TCMX were less than the lower control limits, indicating a potential low bias. All associated results for this sample were estimated (J/UJ-13L).

Field Duplicates

For soil samples, the RPD control limit is 35% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the absolute difference between the sample and replicate must be less than 2x the RL.

TABLE 2 summarizes the complete list of parent sample and field duplicate pairs collected for the Phase II sampling. Field duplicate outliers are noted in the table below. No qualifiers were applied based on field duplicate precision outliers. Data users should take field precision into account when interpreting sample data.

Target Analyte List

Results were reported for all compounds on the target analyte list.

Reporting Limits

All SDGs: Reporting limits (RLs) were elevated due to percent moisture adjustment and/or dilution.

Compound Identification

With the following exceptions, the second column confirmation percent difference (%D) values were less than 40%. If the %D values are greater than 40% and less than 60% results are estimated (J-3), if the %D values are greater than 60% the results are qualified as estimated and tentatively identified (NJ-3).

Calculation Verification (Full Level Validation Only)

SDGs 1595461 and 1600339: Calculation verifications were performed for these SDGs. No calculation or transcription errors were found.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory followed the specified analytical method. With the exceptions previously noted, accuracy was acceptable as demonstrated by the surrogate and LCS & LCS/LCSD and MS/MSD percent recovery values. Precision was also acceptable as demonstrated by the LCS/LCSD, MS/MSD, and field duplicate relative percent difference values.

Results were estimated due to surrogate and MS/MSD recovery outliers, and because the confirmation criteria were not met. One result was also tentatively identified because the confirmation criteria were not met.

All data, as qualified, are acceptable for use.

Matrix Spike/Matrix Spike Duplicates

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed at the appropriate frequency. No action is taken unless both the MS and MSD %R values are outside the control limits for MS/MSD %R outliers.

When the MS/MSD %R values indicate a potential low bias, associated results are estimated (J/UJ-8L). Only the associated positive results are estimated (J-8H) if the %R values indicate a potential high bias.

Precision is evaluated using the relative percent difference (RPD) values calculated between the MS and MSD results. Any RPD values outside the control limits indicate uncertainty in the measured results for the sample. Associated positive results are estimated (J-9) when the RPD values indicate uncertainty. Qualifiers were only issued to the parent sample.

For some SDGs, a sample in the batch from another client was used as the parent sample for the matrix spikes. These batch QC results were not reported in the pdf data package nor the EDD; an evaluation of the spike recoveries could not be made for those samples.

Although various matrix spike samples exhibited recoveries outside of the control limits, only the following analytes required qualification in the associated parent samples:

SDG	PARENT SAMPLE ID	ANALYTE	MS %R	MSD %R	RPD	POTENTIAL BIAS	ACTION

2 *Quality control outliers that impact the reported data were noted. Data qualifiers were issued as discussed below.*

ICP-MS Tune

Multi-element standards covering the mass range of the instrument were analyzed at the required frequency prior to each analytical run. With the exception noted below, all tuning criteria were within the method-defined control limits for method 6020.

SDGs 1599664, 1599905 and 1600650: The relative percent difference (RPD) values for rhodium, indium, and cerium were above the method-defined control limit of 5% for the analyses on 10/22/15. All analyte values from this analytical run were estimated (J/UJ-5A).

CRDL Standards

Low level calibration check standards (CRDL) were analyzed at the required frequency of immediately following calibration and at the end of the analysis. With the exception noted below, all recoveries were within the control limits of 70%-130%.

SDGs 1595461 and 1595467: The barium recovery was less than the lower control limit in the ending CRDL standard analyzed on 10/6/15. The barium results for the associated samples were significantly greater than the reporting limit; no data were qualified.

SDG 1598415: The barium recovery was less than the lower control limit in the beginning CRDL standard analyzed on 10/16/15. The barium results for the associated samples were significantly greater than the reporting limit; no data were qualified.

Method and Instrument Blanks

To assess the impact of any blank contaminant on the reported sample results, an action level is established at five times (5x) the concentration reported in the blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-7). No action is taken if the sample result is greater than the action level, or for non-detected results. For laboratory blanks that are less than the negative MDL, positive results less than the action level of five times the absolute value of the blank concentration are estimated (J-7L) and non-detects are estimated (UJ-7L) to indicate a potential low bias.

Laboratory blanks were analyzed at the appropriate frequency. Contaminant levels, associated samples, and action levels are documented in the data validation worksheets. The following outliers resulted in qualification of data.

SDG 1596117: The mercury result for the ICB was less than the negative MDL. All mercury results less than the action level were estimated (J/UJ-7L).

SDG 1596579: For method 6020A, antimony was detected in the ICB and several instrument blanks for the analyses performed on 10/07/15 and 10/08/15. The associated sample results less than the action level were qualified as not detected (U-7).

For method 6010C, tin was detected in both method blanks. All tin results were qualified as not-detected (U-7).

SDG 1597085: Mercury was detected in the method blank and all instrument blanks for the analysis performed on 10/13/15. All associated sample results were qualified as not-detected (U-7) due to method blank contamination.

SDG 1597492: Mercury was detected in the method blank and all instrument blanks for the analyses performed on 10/13/15. All associated sample results were qualified as not-detected (U-7).

SDG 1597495: For method 7471B, mercury was detected in the method blanks for the analyses on 10/13/15. All mercury results less than the action level were qualified as not-detected (U-7).

For method 6020A, antimony was detected in the ICB and several instrument blanks for the analyses performed on 10/14/15 and 10/15/15. The associated results were qualified as not detected (U-7).

For method 6020A, thallium was detected in the ICB for the analysis performed on 10/15/15. The associated sample results less than the action level were qualified as not detected (U-7).

For method 6010C, tin was detected in the method blanks for the analyses on 10/21/15 and 10/22/15. All tin results were qualified as not-detected (U-7).

SDG 1597838: For method 7471B, mercury was detected in the method blanks for the analyses on 10/13/15 and 10/14/15. All mercury results were qualified as not-detected (U-7).

SDG 1597848: For method 6020A, antimony and thallium were detected in the ICB and several instrument blanks for the analysis performed on 10/15/15. The associated sample results were qualified as not detected (U-7).

For method 6010C, tin was detected in the method blank and all instrument blanks for the analysis on 10/14/15. All tin results were qualified as not-detected (U-7).

For method 7471B, mercury was detected in the method blanks for both analyses on 10/14/15. All mercury results less than the action level were qualified as not-detected (U-7).

SDG 1597985: Mercury was detected in the method blank and several instrument blanks for the analyses performed on 10/14/15 and 10/15/15. All associated sample results were qualified as not-detected (U-7) due to method blank contamination.

SDG 1598833: Mercury was detected in the method blank and all instrument blanks for the analysis performed on 10/15/15. All sample results were qualified as not-detected (U-7).

SDG 1599229: Mercury was detected in the method blank for the analysis performed on 10/14/15. All associated sample results below the action level were qualified as not-detected (U-7) due to method blank contamination.

SDG 1599905: For method 6010C, tin was detected in the method blanks for the analyses performed on 10/22/15. All associated sample results were qualified as not-detected (U-7).

For method 6020A, antimony and thallium were detected in several of the instrument blanks for the analysis on 10/22/15. All associated sample results below the action level were qualified as not-detected (U-7).

SDG 1600339: The mercury results for the ICB was less than the negative MDL for the analyses performed on 10/23/15 and 10/24/15. All associated sample results below the action level were estimated (J/UJ-7L) due to instrument blank contamination.

Field Blanks

Field blanks collected for the sampling event were evaluated for impact of any contaminant on the reported sample results. Action levels were established at five times (5x) the concentration reported in the field blank. If a contaminant is reported in an associated field sample and the concentration is less than the action level, the result is qualified as not detected (U-6). No action is taken if the sample result is greater than the action level, or for non-detected results.

Sample RB-20-10/12/15 was submitted as the only field blank for the Phase III/IV sampling event. Although barium was detected in the field blank, after evaluating the samples against the action level, no qualification was required.

Matrix Spikes (MS)/Matrix Spike Duplicates (MSD)

Matrix spike/matrix spike duplicate samples (MS/MSD) were analyzed at the proper frequency of one per 20 samples or one per batch.

For accuracy, where analyte concentrations were less than 4x the spike amount, the percent recovery (%R) values were evaluated. If the percent recovery values indicate a potential low bias, associated results are estimated (J/UJ-8L). If the %R values indicate a potential high bias, only the associated positive results are estimated (J-8H). If one %R value indicates a potential low bias and the other %R value indicates a potential high bias, the data were estimated with no bias indication (J/UJ-8). Also, no qualifiers were added for single outlier in the MS or MSD only. Finally, for cases indicating conflicting bias because multiple matrix spike samples were included in a batch, only the parent sample was qualified with a bias indication.

For %R values less than 30% (indicating an extreme low bias), the results for the post digestion spike (PDS) were also evaluated. If the post spike %R values were acceptable, then associated results were estimated (J/UJ-8L). If the post spike %R value was also less than the 75% lower control limit, the positive results were estimated (J-8L) and the non-detects were rejected (R-8L).

Precision is indicated by the relative percent difference (RPD) between the MS and MSD values. RPD values outside the control limit of 20% indicate uncertainty in the measured results for the sample and positive results are estimated (J-9).

For some SDGs, a sample in the batch from another client was used as the parent sample for the matrix spikes. These batch QC results were not reported in the pdf data package nor the EDD; an evaluation of the spike recoveries could not be made for those samples.

The following elements were qualified in one or more samples based on %R and/or RPD outliers. Qualifiers were issued to all samples associated with a digestion batch.

Laboratory Duplicates

For laboratory duplicate samples, the RPD control limit is 20% for results greater than 5x the reporting limit (RL). For results less than 5x the RL, the difference between the sample and duplicate must be less than 2x the RL.

For some SDGs, a sample in the batch from another client was used as the parent sample for the laboratory duplicates. These batch QC results were not reported in the pdf data package nor the EDD; an evaluation of the RPDs could not be made for those samples.

Laboratory duplicate precision outliers are listed below.

ICP-MS Internal Standards

For Method 6020A, internal standards (ISTD) were analyzed as required. With the following exceptions, the ISTD %R values were within the criteria of 65% – 135% for all spiked elements.

If the ISTD values indicate a potential low bias, the positive results and/or detection limits were estimated (J/UJ-19L). If the ISTD values indicate a potential high bias, only the positive results were estimated (J-19H).

Interference Check Samples

Interference check standard samples (ICSA/ICSAB) were analyzed as required by the method. The ICSAB %R values were within the criteria of 80% – 120% for all spiked elements.

To assess the potential impact of interferences on the reported sample results, the results for the ICSA were evaluated. For cases where the concentration of a non-spiked analytes in the ICSA was greater than \pm the RL, an action level is established at 2x the absolute value of the ICSA result. If the ICSA values indicate a potential low bias, the positive results less than the action level and/or detection limits were estimated (J/UJ-17L). If the ICSA values indicate a potential high bias, only the positive results which were less than the action level were estimated (J-17H).

The absolute value of the ICSA results for several analytes were greater than the RLs, however the concentrations of interfering elements in the field samples were less than the levels present in the ICSA. No qualifiers were added.

Serial Dilutions

Where analyte concentrations in the parent sample were greater than the 50x the MDL, the percent difference (%D) was calculated. If the serial dilution %D value was greater than 10%, the positive results and/or detection limits in the associated samples are estimated (J/UJ-16).

Reporting Limits

Reporting limits were elevated for samples that required dilution.

Reported Results

No anomalies were noted during validation for evaluated results.

Calculation Verification (Full Level Validation Only)

SDGs 1595461 and 1600339: Several results were verified by recalculation from the raw data. No calculation or transcription errors were noted.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory followed the specified analytical methods. With the exceptions noted previously, accuracy was acceptable as demonstrated by the laboratory control sample (LCS) and MS/MSD %R values. And with the exceptions noted previously, precision was acceptable as demonstrated by the MS/MSD, laboratory duplicate, and field duplicate RPD values.

Detection limits were elevated and results were estimated based on laboratory method and instrument blank results.

Results were also estimated based on internal standard and matrix spike recoveries, laboratory duplicate and matrix spike precision, and instrument tune and serial dilution percent difference outliers.

All data, as qualified, are acceptable for use.

TECHNICAL DATA VALIDATION

The data reported by the laboratory included analyses of pH and oxidation reduction potential to support the results reported for hexavalent chromium. The results for these two tests were evaluated at a summary level validation as companion methods to the hexavalent chromium data.

This report documents the review of analytical QC requirements as listed in the following table.

Matrix Spikes

Matrix spike (MS) analyses were not performed. Accuracy and precision were evaluated utilizing the laboratory control sample (LCS) and laboratory and field duplicate samples.

Field Duplicates

TABLE 2 summarizes the complete list of parent sample and field duplicate pairs collected for the Phase III sampling. Field precision was acceptable for the field duplicates collected for Phase III/IV.

Reporting Limits

The target reporting limits for samples were adjusted for sample size and moisture content. No data were qualified.

Calculation Verification (Full Level Validation Only)

SDG 1596579: Several results were verified by recalculation from the raw data. No calculation or transcription errors were noted.

OVERALL ASSESSMENT

As determined by this evaluation, the laboratory followed the specified analytical methods. Accuracy was acceptable as demonstrated by the laboratory control sample recoveries. Precision was acceptable as demonstrated by the RPD values for the field and laboratory duplicate samples.

Data were estimated based on exceeded holding times; see the *Data Package, EDD, and Holding Time* report for details.

All data, as qualified, are acceptable for use.

Matrix Spikes

Matrix spike samples (MS) were analyzed at the proper frequency of one per 20 samples. If the percent recovery (%R) values indicate a potential low bias, associated results are estimated (J/UJ-8L). If the %R values indicate a potential high bias, only the associated positive results are estimated (J-8H).

The following MS recovery outliers resulted in qualification of data:

Table 3: Data Validation Qualifier Codes - Based on National Functional Guidelines

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents the approximate concentration.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

The following is an EcoChem qualifier that may also be assigned during the data review process:

DNR	Do not report; a more appropriate result is reported from another analysis or dilution.
M	The record in the electronic data deliverable (EDD) was manually entered or updated during data validation.

TABLE 4: Data Qualifier Reason Codes

Group	Code	Reason for Qualification
Sample Handling	1	Improper Sample Handling or Sample Preservation (i.e., headspace, cooler temperature, pH, summa canister pressure); Exceeded Holding Times
Instrument Performance	24	Instrument Performance (i.e., tune, resolution, retention time window, endrin breakdown, lock-mass)
	5A	Initial Calibration (RF, %RSD, r ²)
	5B	Calibration Verification (CCV, CCAL; RF, %D, %R) Use bias flags (H,L) ¹ where appropriate
	5C	Initial Calibration Verification (ICV %D, %R) Use bias flags (H,L) ¹ where appropriate
Blank Contamination	6	Field Blank Contamination (Equipment Rinsate, Trip Blank, etc.)
	7	Lab Blank Contamination (i.e., method blank, instrument blank, etc.) Use low bias flag (L) ¹ for negative instrument blanks
Precision and Accuracy	8	Matrix Spike (MS and/or MSD) Recoveries Use bias flags (H,L) ¹ where appropriate
	9	Precision (all replicates: LCS/LCSD, MS/MSD, Lab Replicate, Field Replicate)
	10	Laboratory Control Sample Recoveries (a.k.a. Blank Spikes) Use bias flags (H,L) ¹ where appropriate
	12	Reference Material Use bias flags (H,L) ¹ where appropriate
	13	Surrogate Spike Recoveries (a.k.a. labeled compounds, recovery standards) Use bias flags (H,L) ¹ where appropriate
Interferences	16	ICP/ICP-MS Serial Dilution Percent Difference
	17	ICP/ICP-MS Interference Check Standard Recovery Use bias flags (H,L) ¹ where appropriate
	19	Internal Standard Performance (i.e., area, retention time, recovery)
	22	Elevated Detection Limit due to Interference (i.e., chemical and/or matrix)
	23	Bias from Matrix Interference (i.e. diphenyl ether, PCB/pesticides)
Identification and Quantitation	2	Chromatographic pattern in sample does not match pattern of calibration standard
	3	2 nd column confirmation (RPD or %D)
	4	Tentatively Identified Compound (TIC) (associated with NJ only)
	20	Calibration Range or Linear Range Exceeded
	25	Compound Identification (i.e., ion ratio, retention time, relative abundance, etc.)
Miscellaneous	11	A more appropriate result is reported (multiple reported analyses i.e., dilutions, re-extractions, etc. Associated with "R" and "DNR" only)
	14	Other (See DV report for details)
	26	Method QC information not provided

¹H = high bias indicated**L = low bias indicated**
